Name : Nomvelo Amanda
Surname : Gcaba
Student Number: 280 500 1563
Course : Data Science
Assignment : 1 - Comprehensive Research

Definition of terms.

1. Data Lake
A data lake is a large storage system that holds raw data in its original form, structured and unstructured data, until it is needed for analysis.

2. Data Mart
A data mart is a smaller, focused part of a data warehouse that is designed for a specific department or purpose (e.g. sales, accounts).

3. Foreign Key
A foreign key is a column in a table that links to the primary key in another table, helping connect related data.

4. Primary Key
A primary key is a column that uniquely identifies each row in a table. No two rows can have the same primary key.

5. Database
Aa database is a storage place for organized collection of data, such that it can be managed and accessed electronically.
